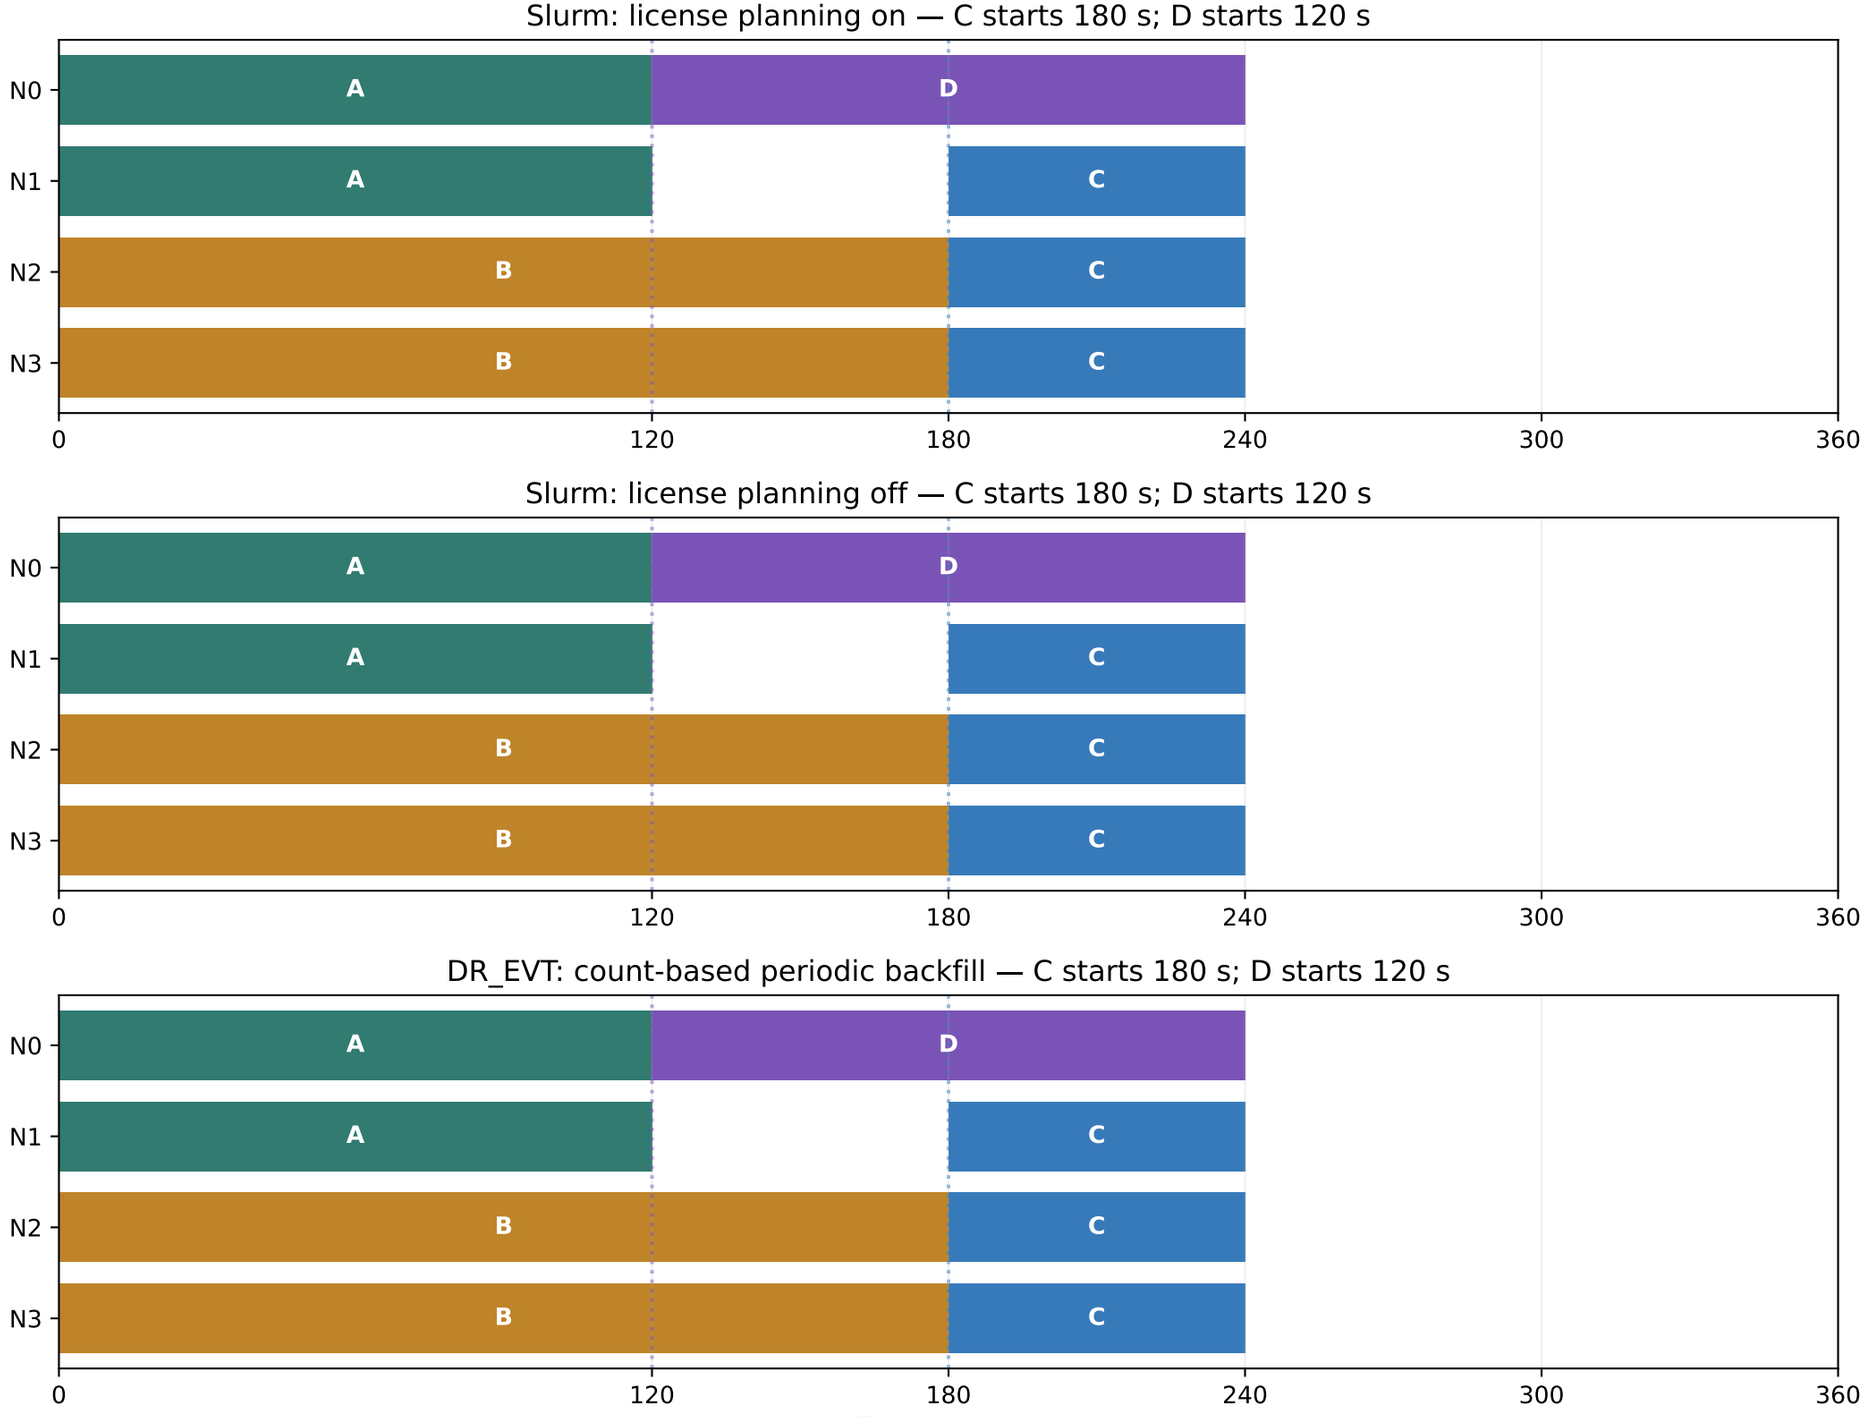
Four-job scheduling with pooled license capacity
Node equivalents are interchangeable; native dummy nodes do not constrain placement

Workload in submission order

Job	Arrival	Nodes	Duration
A	0	2	120
B	0	2	180
C (head)	0	3	60
D (fill)	0	1	120

4 node equivalents total
FCFS; hybrid backfill
R=32, Q=64; interval=30 s
Duration equals submitted time limit



Observed C / D starts (seconds):
License on: 180 / 120
License off: 180 / 120
DR_EVT: 180 / 120

Rows show one feasible placement.
Licenses have no individual node IDs.
